BATTS LIMITED, TORONTO, CANADA

Our Factory at 368 to 400 Pacific Avenue, West Toronto

WE take pleasure in placing before you our 1912-1913 Catalogue which we trust may be of service to you in selecting your future requirements.

It has always been our aim to maintain a high standard on our goods and retain the goodwill of all our customers.

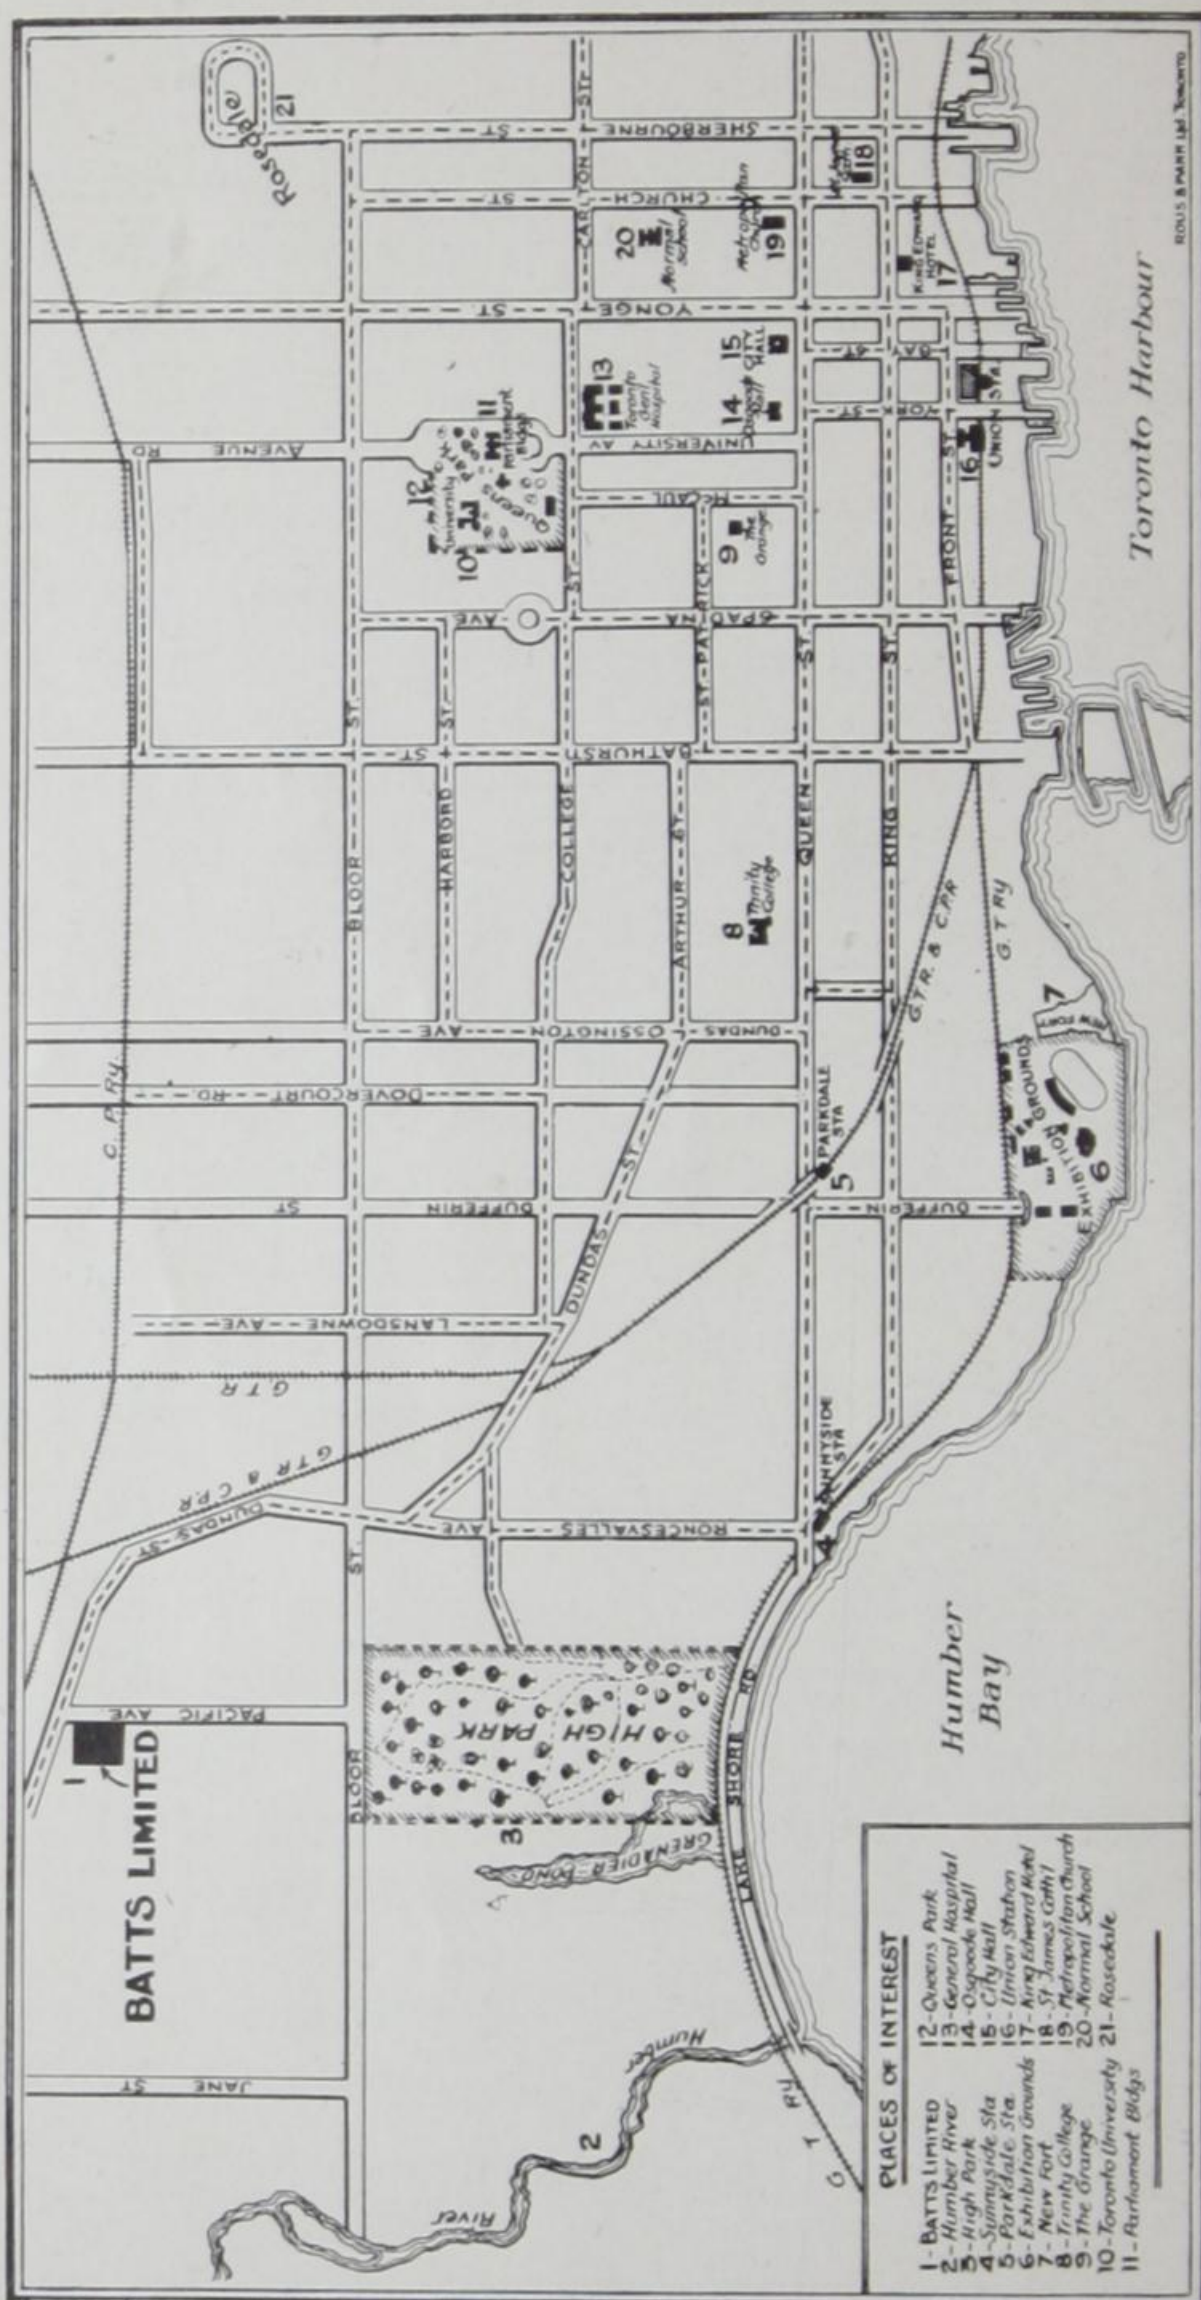

Our Catalogue shows a large assortment of goods carried in stock and all cuts are made from goods manufactured in our factory.

During the past year we have added to our Plant several up-to-date machines, so that we now have the largest and best-equipped Sash, Door and Column Factory in Toronto, enabling us to manufacture high-grade goods at reasonable prices and ensuring prompt delivery.

A visit to our factory will convince you of our ability to fill your orders promptly and satisfactorily, as we carry the largest stock of pine and veneered doors, columns, newel posts and turned balusters in the city.

We wish to thank our old customers and hope the goodwill that exists will continue in the future as it has been granted in the past.

Price of Pedestal only, Style B.....	5.00	3.50

For designs and prices of Columns, see pages 9 to 19

This cut is an end view of our staved column, showing our lock joint.

This joint prevents the staves from opening and also increases the glueing surface.

We use the best grade of waterproof glue obtainable.

The cut to the right will illustrate to you our method of connecting the cap and base to the shaft of our stock columns. Both ends of the shaft are bedded in Mastic Putty. This is our own idea and as far as we know is not in use by any other manufacturer. By this means it makes it impossible for water or moisture to get to the inside of our columns.

King George School, St. John's Road, for which we manufactured 2 columns, 30 in. in diameter, 22 ft. 6 in. long.

Toronto, 1911.

CARE OF VENEERED DOORS

All veneered doors require a small amount of attention on receipt of same from manufacturer. It is to the purchaser's advantage to take note of the following directions:

All wood being of a porous nature, especially that which has been thoroughly dried, readily absorbs moisture from the air, causing it to swell. To overcome this:

First—Keep doors in a dry place.

Second—Give doors one or two coats of good oil filler.

Third—Do not place veneered doors in a freshly-plastered building; see that the plaster is thoroughly dry.

Fourth—When the door has been fitted paint top and bottom with good lead paint.

CARE OF STAVED COLUMNS

To get the best results from staved columns: keep under cover until erected. Paint as soon as possible after being put in position. If necessary to reduce height of column by cutting off base of shaft, it is advisable to well paint the end.

In out-of-town shipments a small tin of mastic putty is nailed to top of base. Contents of this tin should be spread on top of turned base where shaft rests.

GREENHOUSE MATERIAL

This department has grown extensively and now forms a very important part of our business.

One of the most important features in the manufacture of greenhouse material is the kind and quality of the lumber used. We use exclusively Louisiana Gulf Coast Red Cypress, air dried and free from sap. It is less affected by atmospheric conditions and has more desirable qualities for greenhouse construction than any other.

Our long experience in the manufacture of greenhouse material, combined with the best machinery, justifies us in assuring our customers entire satisfaction.

Before buying your greenhouse material do not fail to get our figures. We are satisfied that once you give us an order we shall retain your patronage.
